**DISCUSSION:** The City of Garland operates a municipal landfill at 3637 Castle Drive. The Castle Drive Landfill encompasses approximately 151 acres. The site borders the Castle Miles Landfill which the City of Garland also operates. Actually, the City of Garland operates both landfills as one site. However, for the purposes of this evaluation, the Screening Site Inspection (SSI) evaluates the Castle Drive landfill and the Castle Miles Drive Landfill as separate sites.

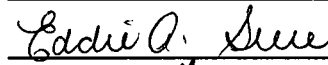

The SSI evaluates the following areas: ground water, surface water, soil exposure, and air pathways, waste source identification, and severity of environmental impact. As a result, the SSI provides a thorough characterization of the site's affect on the environment.

The SSI Part A report includes the majority of the non-sampling data collected. Because of the incompleteness of the analytical data, the Part A report omitted the analytical results. Although omitted from the Part A, The SSI Part B will present this data.

The site assessment section recommends the completion of the SSI Part B report and Prescore package before rendering a final site disposition.
